UI/UX Design Guidelines

Project 6: Factors Influencing Student Performance

1. Design Philosophy

The UI design follows a "Clean & Analytical" philosophy. Since the system is dedicated to educational data analysis, the interface is designed to minimize cognitive load while maximizing data visibility. The layout uses a modular card-based system to separate different analytical metrics clearly.

2. Color Palette

The color scheme was selected to evoke professional stability and trust, common in academic and data-centric applications.

- **Primary Navy (#1A5F7A):** Used for headers and primary navigation to provide a strong sense of structure.
- **Action Blue (#1597BB):** Used for buttons, links, and interactive elements to guide the user's eye.
- **Success Green (#2E7D32):** Used in charts and status indicators to represent positive performance trends.
- **Background Gray (#F4F3EF):** A soft, off-white gray used for the background to reduce eye strain during long analysis sessions.

3. Typography

We utilize "Segoe UI" (or similar Sans-Serif fonts) for its excellent readability on digital screens. Heading styles are bolded and larger to create a clear visual hierarchy, allowing users to scan reports quickly.

4. Layout & Components

The Dashboard (as seen in the mockups) consists of three primary zones:

- **Top Metric Bar:** Quick glance at total students, average grades, and attendance rates.
- **Central Analytics Area:** Interactive charts (Bar and Line) showing correlations between study time and performance.
- **Side Navigation:** Easy access to data import tools, student profiles, and API documentation.

5. Accessibility

The design ensures high contrast ratios between text and background. Interactive elements include hover states to provide visual feedback, ensuring the system is usable for a diverse range of educational administrators.
